I O F A N
GENERAL PHYSICS INSTITUTE
ИНСТИТУТ ОБЩЕЙ ФИЗИКИ

Academician Alexander M. PROKHOROV
Director of General Physics Institute,
Russian Academy of Science, 38, Vavilov
street, 117942, Moscow, Russia.

Statement concerning the researches of Dr. Vladimir F. VASILENKO.

Dr. V. VASILENKO is a scientific collaborator of the Institute. During his work here (since November, 1990) he had done a big scope of experimental work and shows a very good ability to the science.

The topic of his work - "Problems of interaction of red, infra red light and chemical growth regulators within the plant" has very promising data for biophysics, agrochemistry and plant biology. It's well known that mankind cannot do without artificial regulation of the growth and development of agricultural plants. But since many synthetic regulators are toxic the investigators are in permanent search for the more safe substances and methods. One of them is the joint action of light and chemical regulation, which was advanced and elaborated by Dr. Vasilenko, provides a promising results.

I would be pleased for a support for scientific work of Dr. Vasilenko.
